SUMMARY

Data Scientist with expertise in machine learning, NLP, reinforcement learning, and AI-driven product development. Experienced in deploying scalable models, optimizing algorithms, and collaborating cross functionally to deliver AI driven business insights.

EXPERIENCE

- Grazen AI, California, United States - Data Scientist** Oct' 25 - Present
- Led development of YOLO and OCR pipelines, handling data preparation and collection, model fine-tuning and end to end deployment.
 - Built and deployed a FastAPI based SaaS backend containerized docker services, RTSP/RTMP streaming, and LLMs driven agentic system.
- Orbe360, California, United States - Data Scientist** May' 25 - Present
- Developed data pipelines from mined sources and financial document scraping to populate Postgres databases.
 - Engineered agentic chatbot workflows integrated into the ORBE platform and fine-tuned LLMs to build an in-house model.
- DePaul University, Chicago, United States - Research Assistant** Apr' 24 - Dec' 24
- Refined resource allocation methods via Reinforcement learning model focused on optimizing computation tasks within distributed networks; directly improved user experience for thousands of concurrent connections relying on accurate processing times.
- IQM Corporation, New York, United States - Data Intern - Summer** Jun' 24 - Aug' 24
- Conducted R&D on AWS QuickSight to build and deploy an extensive query resolver chatbot using LangChain, achieving 88+ BLEU accuracy in SQL generation and database retrieval for non-tech teams.
- IQM Corporation, Ahmedabad, India - Data Scientist** Jan' 22 - Aug' 23
- Analysed large datasets using cosine similarity to assign 100,000-150,000 URL views to potential viewer IDs, enhancing data accuracy and user insights.
 - Developed APIs for keyword extraction and implemented a BERT NLP model to predict categories for URLs, achieving efficient labelling of approximately 6,500 URLs every 12 hours.

SKILLS

- **Programming:** Python, R, SQL, Java
- **ML/AI Frameworks:** Scikit-learn, TensorFlow, PyTorch, Hugging Face, LangChain, LangGraph, Scikit-learn
- **Databases:** PostgreSQL, MySQL
- **Data & MLOps:** ETL, Feature Engineering, Model Deployment, Experiment Tracking, CI/CD, Docker, AWS SageMaker
- **Analytics & BI:** Power BI, Tableau, AWS QuickSight, Snowflake
- **Techniques:** Machine Learning, Deep Learning, NLP, Generative AI, Reinforcement Learning, Computer Vision, A/B Testing, Predictive Modeling, Agentic Modelling

PROJECTS

- QA-Youtube-Videos**
- Developed a Streamlit application leveraging GPT-3.5 with RAG architecture, LangChain tool calling, and FAISS-based semantic search to analyze YouTube video transcripts with support for multilingual queries and transcript translation.
- Molecular Communication**
- Designed and evaluated ANN and LSTM models for binary code prediction in a fluid medium, achieving 99.27% accuracy with LSTM. LSTM outperformed ANN by 0.3% in accuracy.

CERTIFICATIONS

1. Machine Learning - Stanford University
2. How Google does Machine Learning – Coursera
3. Chatbot Workshop - The MAD
4. Google Cloud Big Data and Machine Learning Fundamentals - Coursera

EDUCATION

- DePaul University, Chicago, United States**
- Masters of Science in Computer Science* Sept' 23 - Mar' 25
- Coursework:* Programmatic Machine Learning, Artificial Intelligence, Data Mining, Database Systems
- Ahmedabad University, Gujarat, India**
- Bachelor's in Information and Communication Technology* Aug' 18 - May' 22
- Coursework:* Machine Learning, Probabilistic Modelling, NLP, Computer Vision, Industrial Statistics
